

PSD2Outbound GCO Alert - CoFi service error slowburn rate : Slow burn rate - 5.5/1hr/1%

PSD2Outbound GCO Alert - CoFi service error slowburn rate : Slow burn rate - 5.5/1hr/1%

Why do we have this alert?

- This alert will trigger when,
 - Slow burn rate (**5.5/1hr/1%**)
 - Error budget consumption crossed 80%
 - SLO compliance violation

What does this alert mean?

- Slow-burn: Slightly exceeding where we'd like to be at this point.
- Error budget consumption: Need to prioritize and engage respective application teams to start diagnosing the source of problem.

Impact to customer

- Service reliability may be compromised, and user experience may go down.

Investigation Steps

- Generic steps:
 1. Infra estate (GCO)
 - a. Have a quick check on GKE cluster health (cpu, memory, disk & network utilization) that including nodes & workloads.
 2. Application logs (GCO)
 - a. Review application log to identify any unusual activities.
 3. Throughput (GCO)
 - a. Check if there is any spike in traffic. This information can be found using "Golden Signal - Traffic" dashboard.
 4. External services & dependencies (GCO)
 - a. Check interface performance & availability. We do connect to different third party banks.
- Flow specific investigation steps:
 1. Database query
 - a. Identify credit_application_id and identify event life cycle using sql query
 - b. Failed/rejected event's json payload will give you clarity about the latency or failure.
