

PSD2Outbound GCO Alert -sealhub-service_error : Slow burn rate - 5.5/1hr/1%

PSD2Outbound GCO Alert -sealhub-service_error : Slow burn rate - 5.5/1hr/1%

Why do we have this alert?

- This alert will trigger when,
 - Slow burn rate (**5.5/1hr/1%**)
 - SLO compliance violation

What does this alert mean?

- The SealHub is a component within the Central Engine (PSD2).It's Services ensure a controlled usage of certificates stored Deutsche Bank via dbKeyProtect.
- Slow-burn: Slightly exceeding where we'd like to be at this point.
- Error budget consumption: Need to prioritize and engage respective application teams to start diagnosing the source of problem.

Impact to customer

- Service reliability may be compromised, and user experience may go down.

1. Generic steps:

- Infra estate (GCO)
 - Have a quick check on GKE cluster health (cpu, memory, disk & network utilization) that including nodes & workloads.
 - Application logs (GCO)
 - Review application log to identify any unusual activities.
 - Observability and Monitoring (GCO)
 - Check in the SLOs overview and select sealhub service to get the details about the same.
 - Check in the logs to get more details about any unusual activity
- Check sealhub service availability and sealhub service latency to understand about the error budget remaining.

Investigation Steps

- Get the Audit id/session id from the alert.
- Check the Audit_log Table using the audit_id with query given below.
- We will be able to find more details from the response body & credit application id affected can also be available there.
- If we got the credit application id search with the same in cofi logs.
- check for the logs in GCO as well where you can find the error details and same can be shared with RTB team for further investigation

2. Query

```
SELECT
*
FROM
vdb308_owner_docseal.audit_log
WHERE
audit_id = 'xxx'
ORDER BY
created_date_time;
```
