

PSD2Outbound GCO Alert -dbproxy_service_error_slo : Fast burn rate - 13.44/1hr/2

PSD2Outbound GCO Alert -dbproxy_service_error_slo : Fast burn rate - 13.44/1hr/2

Why do we have this alert?

- This alert will trigger when,
 - Fast burn rate (**13.44/1hr/2%**)
 - Error budget consumption crossed 80%
 - SLO compliance violation

What does this alert mean?

- DB Proxy(TPP) will support external partner for PSD2 Flows.
- It will be using PSD2 eIDASQWAC and/or QSEAL certificates for communication.
- Fast-burn: Sudden & large change in consumption i.e. 13.44/1hr/2%. If left unattended then error budget will be consumed before SLO window.

Impact to customer

- Service reliability may be compromised, and user experience may go down.

Investigation Steps

Generic steps:

1. Infra estate (GCO)
 - a. Have a quick check on GKE cluster health (cpu, memory, disk & network utilization) that including nodes & workloads.
2. Application logs (GCO)
 - a. Review application log to identify any unusual activities.
3. Observability and Monitoring (GCO)
 - a. Check in the SLOs overview and select db-proxy service to get the details about the same.
 - b. Check in the logs to get more details about any unusual activity
4. Check db-proxy service availability and service latency tab to understand the error budget remaining.

Investigation Steps

- For any tpp-proxy request, the request will flow from tpp-proxy to SealHub.
- So any investigation for tpp-proxy issue we need to check the request in two schema as VDB308_OWNER_TPPPROXY and VDB308_OWNER_DOCSEAL.
- Get the Audit id/session id from the alert.
- Check the Audit_log using the id.
- We will be able to find more details from the response body & credit application id affected can also be available there.
- If we got the credit application id search with the same in cofi logs.
- check for the logs in GCO as well where you can find the error details and same can be shared with RTB team for further investigation

Query

```
SELECT
  *
FROM
  vdb308_owner_docseal.audit_log
WHERE
  audit_id = 'xxx'
ORDER BY
  created_date_time;
```
