

PSD2Outbound GCO Alert - Cloud SQL Error [Generic]

PSD2Outbound GCO Alert - cloud_sql_severity_error

Why do we have this alert?

- To identify the error triggered from the cloud sql and breaching the threshold.

What does this alert mean?

- To keep track of Cloud SQL database error

Impact to customer

- Impact to the customer depends on the error occurred on which table and type of error message.
- This can only be identified while looking in to the cloud sql logs.
- If the concerned service is not able to perform critical business operation because of the these alert then it will have the direct impact to the customer.

Investigation Steps

- Go to SQL instance in google console.
- Check the logs with severity greater than ERROR.

```
resource.type="cloudsql_database"  
resource.labels.database_id="db-prd-2xvm-mp-psd2ce-obd:psd2ce-outbound-db"  
severity>=ERROR  
textPayload !~ "db=psd2_outbound_prd,user=ia-cloudsql-account@db-prd-2xvm-mp-psd2ce-obd.iam"
```

- Now if you look in to the filter condition, i've exclude a service account from it, this is SA we use to get the access to individual user which allows us to connect to cloud sql and run queries, as we are human and tend to make mistakes and typos, this error also tracked via cloud sql and logged and to remove the noise i've excluded error from service account - [ia-cloudsql-account@db-prd-2xvm-mp-psd2ce-obd.iam](#)
- Now this is very generic alert and can contain variety of other scenarios which cannot be documented here at this moment[may be in future we can], support member who is investigating this issue should use his basic analysis skill to find the real cause of the problem and inform the team about the issue.
- One of the incidents that forced us to create this alert is mentioned below. The cause of the below issue is the unavailability of the end of the month partition table which leads to loss of data from audit_log table. Below are the evidences of those failed attempts

```
"2024-06-30 23:14:48.184 UTC [2683385]: [104-1] db=psd2_outbound_prd,user=xs2a-cofi-cloudsql-sa@db-prd-2xvm-mp-psd2ce-obd.iam ERROR: no partition of relation "audit_log" found for row"
```
