

GCO Alert - Crypto Container Restart count >1

PSD2Outbound GCO Alert - Crypto Container Restart count >1

Why do we have this alert?

- To ensure Crypto service is healthy

What does this alert mean?

- Pod is in pending state and is waiting to get scheduled
- Pod successful lifecycle: Pending -> Running -> Succeeded

Impact to customer

- With lesser number of pods, service performance may degrade. End user may experience slow response.

Investigation Steps

- In GCP console click on "Navigation Menu" "Kubernetes Cluster" "Clusters" "[outbound-prd-gke](#)"
- Check the logs for more details like exact error message and reason for container restart.

Cluster	outbound-prd-gke
Namespace	psd2ce-mp-outbound
Labels	app=x2a-account-service, chart=x2a-account-service-0.0.1, heritage=Helm, release=psd2ce-live
Log	Container logs, Audit logs
Replicas	3 updated, 3 ready, 3 available, 0 unavailable
Pod specification	Revision 7, containers: main, volumes: volume-x2a-configmap, volume-x2a-secrets, volume-x2a-secrets-certificates, volume-x2a-secrets-keystore-and-truststore, volume-oracle-secrets
Horizontal Pod Autoscaler	Not configured
Vertical Pod Autoscaler	Not configured

Revision	Name	Status	Summary	Created on	Pods running/Pods total
7	x2a-account-service-6f8f8b5db	OK	main: antfactory.sdc.cft.gcp.db.com/dir-public-local.com/db/payment/service/directive/x2a-account-service-0.2.2-RELEASE	11 Jun 2024, 18:38:32	3/3

Revision	Name	Status	Restarts	Created on
7	x2a-account-service-6f8f8b5db-hdwy	Running	0	11 Jun 2024, 18:38:32
7	x2a-account-service-6f8f8b5db-9wft	Running	0	14 Jun 2024, 06:44:02
7	x2a-account-service-6f8f8b5db-4t9f	Running	0	14 Jun 2024, 06:44:04

Name	Type	Endpoints
x2a-account-service	Cluster IP	240.20.190.170

Remediation steps

- Go to below link and check the logs for the pod which has restarted
[crypto-service – Deployment details – Kubernetes engine – db-prd-mp-psd2ce-obd – Google Cloud console](#)
- Check the specific error message and take necessary action accordingly.
- Escalate to RTB team if anything found abnormal.

Verification Steps:

- Go to below link and check the logs for the pod which has restarted
[crypto-service – Deployment details – Kubernetes engine – db-prd-mp-psd2ce-obd – Google Cloud console](#)
- Check for that particular pod logs and check status of pod and confirm the pod is running.
- check error logs like OOMKilled, Error.
- check current logs and previous logs.
