

PSD2Outbound GCO Alert - psd2ce space issue in pod enabled

PSD2Outbound GCO Alert - space issue in pod enabled.

Why do we have this alert?

- This alert is triggering when there is no space left on the pod of a PSD2CE microservice.

What does this alert mean?

- This means no space or namespace is full in pod.

Impact to customer

- its preventing new process from starting and Requests may get fails if no action taken.

Investigation Steps

Please take below scenarios into consideration while investigating space issue in pod.

Resource Exhaustion:

Each node in a Kubernetes cluster has a limit on the number of processes it can handle. If applications or services are handling too many concurrent processes, you may hit this limit.

Infinite Loops or Leaks:

Applications that inadvertently enter infinite loops or do not properly clean up background processes can lead to an accumulation of processes, quickly exhausting the available space. Profile your workloads to identify memory bottlenecks and optimize them.

Misconfigured Pod Resources:

Applications that enter infinite loops or do not properly clean up background processes can lead to an accumulation of processes, quickly exhausting the available PIDs.

- Also Click on the URL given in this alert notification to check the logs and try to find out the exact reason for the no space issue in pod.

Remediation steps

- Once you find the relevant logs share it with dev team to get the more details and remediate this issue.
- Please refer contact details in additional information section.

Verification steps -

- Check in GCP workload console .
- Go to specific service node and pod, verify all pods are healthy , up and running .
