

PSD2Outbound GCO Alert - Crypto / Cofi_Service_5XX_server_error stip Count based metric version 1

Count based failures for crypto-service_5xx_server_error

Why do we have this alert?

- Third party bank calls are going via crypto, If there is any issues with Crypto which will affect COFI request.

What does this alert mean?

- This is to alert us, if any CoFi request are failing due to crypto service error.

Impact to customer

- Customer may not be able to proceed with credit request from the third party bank

Investigation Steps

Please note this alert is triggered from a count based metric which means this alert will only provide the count of requests which are failed with Internal Server Error 5xx for crypto(sealhub) service. To Identify which requests are failed with 5xx error , we need to check the log based alert for crypto(sealhub) service for 5xx error. When the count based alert is triggered , a log based alert should have been triggered as well. Follow below steps to find out the details of the requests which failed with 5xx error.

Navigate to "Alerting" page in Google Console using below link :

[Alerting – Monitoring – db-prd-mp-psd2ce-obd – Google Cloud console](#)

Search for the latest alert for "crypto-service(Log based)_5xx_server_error". under the Incidents section :

State	Severity	Policy name	Incident summary	Opened	Closed	
	Warning	Database - Cloud ...	Condition "Query Execu...	20 Jan 2026, 16:27:38	-	
	Warning	Xs2a account ser...		20 Jan 2026, 16:08:57	20 Jan 2026, 16:13:59	
	Warning	Xs2a account ser...	Xs2a service_5xx_server...	20 Jan 2026, 14:54:55	20 Jan 2026, 14:56:05	

Then navigate to Logs by clicking on the "Incident Summary" for the required alert

Text in the logs shall have the details about the audit_id, request_id i.e.

2026-01-10 09:54:41 ERROR [qtp1978471002-17]{auditId=e1c4cd3e-6302-47e8-a69d-bff47b72ac7c, reqId=47339b04-5d87-48f1-b26b-7fa860b3a498, txId=3b4aec36b1caec4616a84d8745b2823} CryptoServiceExceptionHandler: 165 - Exception occured while processing the request | http status code : 500 INTERNAL_SERVER_ERROR | exception description : Failed to execute task [task=generate signature]

In this case , the audit_id is e1c4cd3e-6302-47e8-a69d-bff47b72ac7c

Now connect to CloudSQL database and run below queries to identify what caused failure and which flow is impacted :

SELECT * FROM sealhub_db.audit_log WHERE audit_id = 'e1c4cd3e-6302-47e8-a69d-bff47b72ac7c' ORDER BY created_date_time;

audit_id	req_id	tx_id	method	url	req_header
1 e1c4cd3e-6302-47e8-a69d-bff47b72ac7c	47339b04-5d87-48f1-b26b-7fa860b3a498	3b4aec36b1caec4616a84d8745b2823	POST	/v3/signHash	{x-reque

Please note : If the request for account_details came in for Deutsche Bank , the request_id we can find out in our 4p database in event_log table. If it is for some other bank , we might not have the request_id in our 4p database.

For scenario where the request is for some other bank (we will not have request details in 4p database). Please follow below steps :

Get the tx_id from above output 3b4aec36b1caec4616a84d8745b2823 . This is same as found in logs in first step.

Run below query to find out the reason for failure :

SELECT * FROM db_proxy_db.event_log WHERE request_id = '3b4aec36b1caec4616a84d8745b2823' ORDER BY created_date_time;

id	reference_id	request_id	event_type	description	http_rs_coc
1 b9099...	3b4aec36b1caec4616a84d8745b2823	3b4aec36b1caec4616a84d8745b2823	Sigm_Message	I/O error on POST request for "http://crypto-service/v3/signHash": Read timed out 408	
2 ef03e...	3b4aec36b1caec4616a84d8745b2823	3b4aec36b1caec4616a84d8745b2823	TPP_Sign	I/O error on POST request for "http://crypto-service/v3/signHash": Read timed out 408	

Please reach out to crypto servicedesk <crypto.servicedesk@[db.com](mailto:crypto.servicedesk@db.com)> team to understand if there is any ongoing issue at their side causing the Timeouts/Internal server error.

If the errors continues , please engage them by calling their hotline **+49 69 910 62325**

Verifications Steps:

- Use the queries given in Investigation steps to identify if the issue persists or we are getting successful requests.
- The complete verification is not possible immediately after investigation but depends on the updates from the upstream/downstream.
- Once we see no more alerts triggered and the count of errors are below threshold and based on the updates from upstream/downstream systems , accordingly we can conclude on closure.
