

GKE-POD Unhealthy detected

PSD2Outbound GCO Alert - K8s Pod Unhealthy

Why do we have this alert?

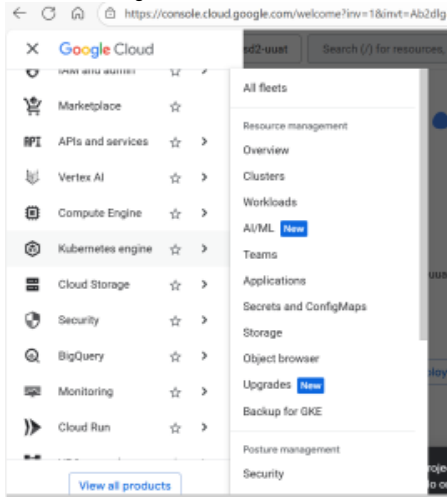

- To notify if any issues with the k8s pod

What does this alert mean?

- This alert will trigger if any of the running pod status change.

Investigation Steps

- Open GCP console.
- Inside the Navigation Menu > Click or hover over the "Kubernetes Engine".

- Then click on the "Cluster" you can see one cluster "gke-prd" open it.

A screenshot of the Google Cloud console showing the details of a Kubernetes cluster named 'gke-prd'. The left sidebar shows the 'Kubernetes engine / Clusters' path. The main content area has tabs for 'Overview', 'Utilisation', 'Observability', and 'Cost optimisation'. The 'Overview' tab is active, showing three status cards: 'Health' (100% healthy), 'Upgrade' (100% up to date), and 'Estimated monthly cost' (€6,747.49/month). Below these is a table of clusters.

Filter	Status	Name	Location	Fleet	Number of nodes	Total vCPUs	Total memory
	✓	gke-prd	europa-west3	db-prd-2bk8-psd2 fleet	6	384	1,440 GB

- Now you can view the whole detail of the "gke-cluster"

The screenshot shows the 'Cluster details' page for a cluster named 'gke-prd'. The left sidebar contains navigation options like 'All fleets', 'Fleet', 'Resource management', 'Overview', 'Clusters', 'Workloads', 'AI/ML', 'Teams', 'Applications', 'Secrets and ConfigMaps', 'Marketplace', and 'Release notes'. The main content area displays 'Cluster overview' with fields for Name, Fleet, Location type, Region, Default node zones, Release channel, Version, and Labels. Below this is a 'Resources' section with a link to the console.

- Check which pod got restarted and then search in workloads tab.
- Since we are investigating the pod health, will move to the "pod" tab. Go to the workloads tab

The screenshot shows the 'Workloads' page in the Google Cloud console. It features a search bar, filters for 'Cluster' and 'Namespace', and a table of workloads. The table columns include Name, Status, Type, Pods, Node type, Fleet, Namespace, and Cluster. Four workloads are listed, all with a status of 'OK'.

- Once you found the pod, click on pod name and will get the pod details.

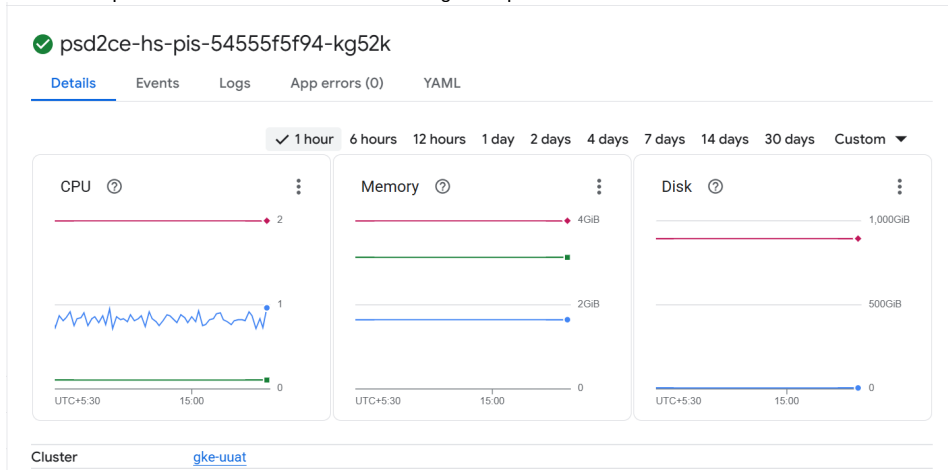

The screenshot shows the 'Deployment overview' page for a deployment named 'psd2ce-hs-pis'. It includes tabs for 'Overview', 'Details', 'Observability', 'Revision history', 'Events', 'Logs', 'App errors (0)', and 'YAML'. The 'Overview' tab is active, showing three graphs for CPU, Memory, and Disk usage over time. The status of the deployment is 'Running'.

- If pod is running its showing green else if its unhealthy we can see orange/red.
- Then scroll the page will find the managed pods tab

Managed pods

Filter Filter pods						
Revision	Name	Status	Restarts	Created on		
194	psd2ce-hs-pis-54555f5f94-dd5pg	Running	0	28 Jan 2026, 21:47:48		
194	psd2ce-hs-pis-54555f5f94-kg52k	Running	0	29 Jan 2026, 12:27:44		

- Click on the pod name which is restarted and will get the pod details

- If we scroll down will get the container tab and from there will get the container name, to check container details click on container name, will get the container details and when it gets restarted.

- On that page move to logs tab and we can see why the pod got restarted

- LOGS and EVENTS tabs can be used to find more traces for these kind of event.
- Based on log analysis check with dev team for further action.
