

PSD2Outbound GCO Alert - Automated SQL Backup Failure

PSD2Outbound GCO Alert - Automated SQL Backup Failure

Why do we have this alert?

- Backups help you restore lost data to your Cloud SQL instance. Additionally, if an instance is having a problem, you can restore it to a previous state by using the backup to overwrite it. Enable automated backups for any instance that contains necessary data. Backups protect your data from loss or damage.

What does this alert mean?

Automated backup scheduled for sql are failing.

Impact to customer

- Primary disk is potential data lose. Without recent backup any data added/modified since last backup could lose.
- If database failure happen then we may need to perform restoration from old backup.

Investigation Steps

- Go to google cloud console
- Navigate to PostgreSQL >> Backups
- Review the backup details

All instances > psd2ce-outbound-db

psd2ce-outbound-db

PostgreSQL 14

Settings

Automated backups	Enabled
Backups window	7:30 AM ~ 11:30 AM (IST)
Automated backups retained	7
Point-in-time recovery	Enabled
Days of logs retained	7
Location	Multi-region: eu

CREATE BACKUP

Jun 13, 2024, 9:28:52 AM	Automated	Multi-region: eu	—	Customer-managed	1	Restore
Jun 12, 2024, 8:17:45 AM	Automated	Multi-region: eu	—	Customer-managed	1	Restore
Jun 11, 2024, 10:01:41 AM	Automated	Multi-region: eu	—	Customer-managed	1	Restore
Jun 10, 2024, 9:35:36 AM	Automated	Multi-region: eu	—	Customer-managed	1	Restore
Jun 9, 2024, 8:05:01 AM	Automated	Multi-region: eu	—	Customer-managed	1	Restore
Jun 8, 2024, 10:04:58 AM	Automated	Multi-region: eu	—	Customer-managed	1	Restore
Jun 7, 2024, 9:52:43 AM	Automated	Multi-region: eu	—	Customer-managed	1	Restore

- Navigate to log explorer
- Check for PostgreSQL logs
- Use the below filter to fetch the backup details

protoPayload.resourceName="projects/db-prd-2xvm-mp-psd2ce-obd/instances/psd2ce-outbound-db"

protoPayload.metadata.@type="type.googleapis.com/speckle.AutomatedBackupEventLog"

Verification Steps

- Navigate to log explorer
 - Check for PostgreSQL logs
 - Use the below filter to fetch the backup details
- protoPayload.resourceName="projects/db-prd-2xvm-mp-psd2ce-obd/instances/psd2ce-outbound-db"
- protoPayload.metadata.@type="type.googleapis.com/speckle.AutomatedBackupEventLog"

- Make sure that Automated SQL Backup started working fine as highlighted in the below screen shot.

Showing logs for last 7 days from 07/11/2025, 17:04 to 14/11/2025, 17:04.Extend time by: 1 day▼Export
