

PSD2Outbound GCO Alert - Cloud SQL CPU utilization

PSD2Outbound GCO Alert - cloud_sql_cpu_utilization

Why do we have this alert?

- To identify if the sql cpu utilization breaching the threshold.

What does this alert mean?

- To keep track of database SQL CPU Utilization

Impact to customer

- Higher Utilization in most cases may overwork the CPU(s) and increase the CPU response time or Latency which in turns impacts performance of the database.
- Quieres may take longer to execute.
- It can limit database ability to establish new connection.

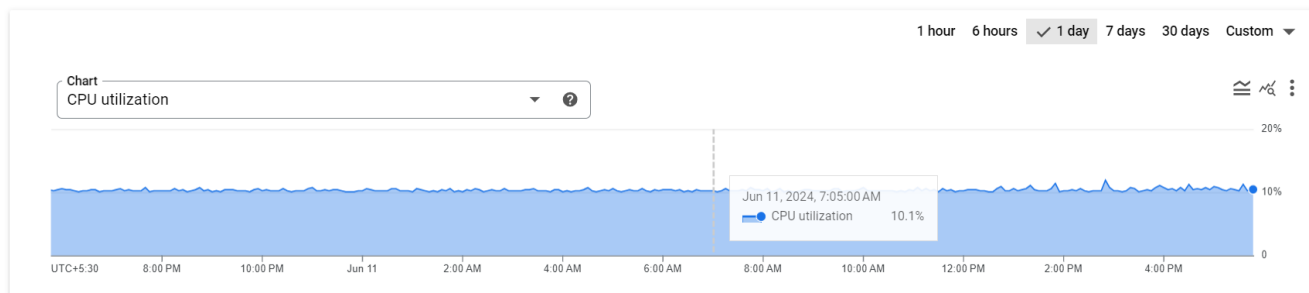

Investigation Steps

- Go to SQL instance in google console
- check the utilization chart is available in instance summery.

All instances > psd2ce-outbound-db

✓ psd2ce-outbound-db

PostgreSQL 14

Verification Steps

- Go to Google Cloud Console.
- Navigate to **Databases > SQL**.
- Click on the **SQL instance**.
- Scroll down and look for the "**Instance summary**" or "**Monitoring**" section.
- Verify that the **utilization charts** for CPU and make sure its under the threshold value.
