

PSD2Outbound GCO Alert - CoFi scheduler failure

PSD2Outbound GCO Alert - CoFi scheduler failure

Why do we have this alert?

- CoFi Scheduler is to update Bank id of the active external bank, running on every Monday.
- Update is happening in table named external_bank_details, column bank_id
- if there is any issue with bank list end point api, it will affect the bank id update & which will affect the customer credit request.
- Bank ID must be in sync with VOEB

What does this alert mean?

- To indicate if bank id is not in sync with VOEB, because scheduler is not working as expected.

Impact to customer

- Customer may not be able to proceed with credit request from the third party bank

Investigation Steps

- Login to DB and check in external_bank_details table, whether Bankid updated or not

Query

```
SELECT
    MAX(updated_date_time)
FROM
    vdb308_owner_xs2a_account.external_bank_details
WHERE
    name = 'BankName';
```

Remediation Steps

- If the scheduler is not worked on Monday we need to execute the scheduler.
- Account service needs to be restarted after that.

Verification Steps

- Make sure that bankid should be updated with latest date.
- Use below query to verify the same.

SQL

```
SELECT
    MAX(updated_date_time)
FROM
    vdb308_owner_xs2a_account.external_bank_details
WHERE
    name = 'BankName';
```
