

PSD2Outbound GCO Alert - GKE Container Restart Count

PSD2Outbound GCO Alert - GKE Container Restart Count

Why do we have this alert?

- To ensure GKE cluster is healthy

What does this alert mean?

- Pod is in pending state and is waiting to get scheduled
- Pod successful lifecycle: Pending -> Running -> Succeeded

Impact to customer

- With lesser number of pods, service performance may degrade. End user may experience slow response.

Investigation Steps

- In GCP console click on "Navigation Menu" "Kubernetes Cluster" "Clusters" "[outbound-prd-gke](#)"

Cluster

outbound-prd-gke

Namespace

psd2db-microservice

Labels

app: xs2a-account-service app.kubernetes.io/managed-by: Helm chart: xs2a-account-service-0.0.1 heritage: Helm release: psd2ce-live

Logs

Container logs Audit logs

Replicas

3 updated, 3 ready, 3 available, 0 unavailable

Pod specification

Revision 7, containers: main, volumes: volume-xs2a-configmap, volume-xs2a-secrets, volume-secrets-certificates, volume-xs2a-secrets-keystone-and-truststore, volume-oracle-secrets

Exposing services

Name	Type	Endpoints
xs2a-account-service	Cluster IP	240.20.190.170

Verification Steps:

- Container restarts occur mainly reason like applications-Level failures, misconfiguration and resource exhaustion like out of memory, CPU exhaustion, and Failed health checks probe etc.
- checks pod current state and restart count.
- container has restarted then we must check logs of it.
- Please check memory and CPU status that breached threshold value.
- In the logs explorer you can check for like FATAL, ERROR etc around the time of restart.
- Also please check any Change or activity scheduled during container restart time.

Remediation steps

- Go to workload -click on microservice for which pod is restarted
- Check the logs for specific error message and take necessary action accordingly.
