

PSD2Outbound GCO Alert - GKE Node CPU Utilization

PSD2Outbound GCO Alert - GKE Node CPU Utilization

1.1. Why do we have this alert?

- This alert is to inform support team that CPU utilization of the GKE Node is reached to its peak value.

1.2. What does this alert mean?

- This means GKE node has higher CPU utilization.

1.3. Impact to customer

- It can lead to node restart and die to which requests may get fails with time-out errors if no action taken.

1.4. Investigation Steps

- Click on the URL given in this alert notification to check the logs and try to find out the resource that consuming high CPU.
- There could be multiple scenarios due to which CPU utilization spikes, Below are few among them.
- By default, GKE enables logging and monitoring features, which can consume high CPU utilization.
- Again if any of the pod consumes more CPU than expected then it could also leads to high CPU utilization hence recommend to check logs for pod which consumes more resources.

1.5. Remediation steps

- Once you get the relevant logs then share it with dev team to get the more details and remediate this issue.

1.6. Additional Information

RTB team Contact Details : psd2.rtb@list.db.com

1.7. Verification steps

- Go to GKE Console -> Dashboard -> Pick the Dashboard -> Check CPU usage graph.
- Verify the CPU has dropped below the alert threshold.
- Ensure the trend remains stable for at least 10-15 minutes.
