

PSD2Outbound GCO Alert - GKE Pod CPU Utilization

PSD2Outbound GCO Alert - GKE Pod CPU Utilization

Why do we have this alert?

- This alert is to inform support team that CPU utilization of the GKE pod is reached to its peak value.

What does this alert mean?

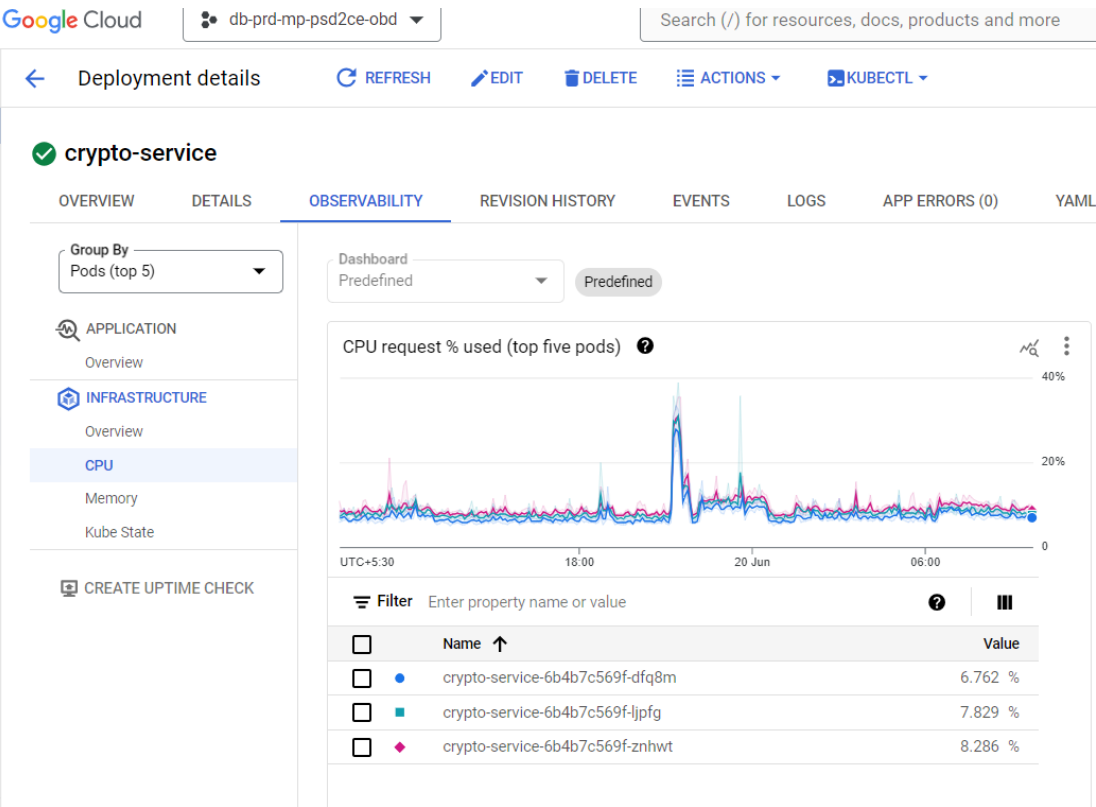

- This means GKE pod has higher CPU utilization.

Impact to customer

- Higher Utilization in most cases may overwork the CPU(s) and increase the CPU response time or Latency which in turns impacts performance of the database.
- Quires may take longer to execute.
- It can limit database ability to establish new connection.

Investigation Steps

- Go to pod instance from google console as per alert.
- Check the utilization chart is available in instance summary.

Verification steps-

- Click on the URL given in this alert notification to check the logs and try to find out the resource that consuming high CPU.
- There could be multiple scenarios due to which CPU utilization spikes .
- By default, GKE enables logging and monitoring features, which can consume high CPU utilization.

- Again if any of the pod consumes more CPU than expected then it could also leads to high CPU utilization hence recommend to check logs for pod which consumes more resources.
- Once you get the relevant logs then share it with dev team to get the more details and remediate this issue.
