

PSD2Outbound GCO Alert - GKE Pod Memory Limits

PSD2Outbound GCO Alert - GKE Pod Memory Limits

Why do we have this alert?

- This alert is to inform support team that Memory utilization of the pod is reached to its peak value.

What does this alert mean?

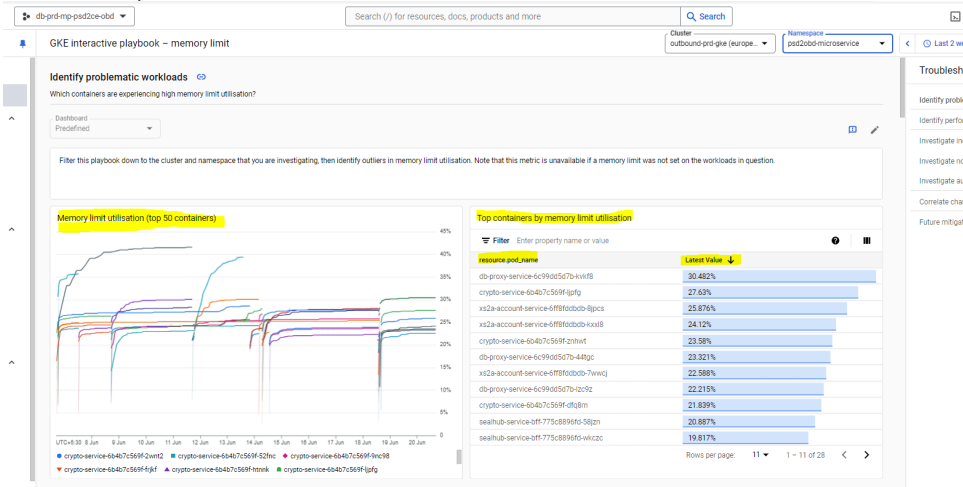

- This means pod has consumed higher memory and there is less space remained in pod memory.

Impact to customer

- Requests may get fails with "out of memory" error if no action taken.

Investigation Steps

- Click on the URL given in this alert notification to check the logs and try to find out the exact reason and pod that consumed high memory.
- Examine the below chart to see if there are **OOMKilling** events in your cluster. If any exist, cross-reference the cluster audit logs to examine which pods were killed due to OOMs.

- Check to see if there have been any recent changes made that could have affected memory utilization : [Jump to Correlate change events](#)

Remediation steps

- Share your all investigation details with dev team and provide them the logs and pod name which consumes more space or killed with OOM error.

Verification steps

- Check the utilization pods running under the each nodes using dashboard [GKE interactive playground – memory limit – Monitoring – db-prd-psd2 – Google Cloud console](#)
- Make sure the utilization is within permissible limits.
