

PSD2Outbound GCO Alert - Latency Alert

Latency Alert

Why do we have this alert?

- This alert helps to identify high response time for all individual microservices in NAR2.

What does this alert mean?

- This alert is triggered if response time of any of the microservice is more than usual in last 15 mins.

Impact to customer

- If response time is higher for microservices, than customer may experience slowness or even timeouts for their requests.

Investigation Steps

- We can begin the analysis by retrieving the call details from the database for those that exceeded the threshold. The response time for each call is recorded in the database.
- Please examine the response codes of the calls that crossed the threshold to determine if any calls are failing.
- Additionally, check whether any specific call is taking longer than usual and if this pattern persists
- If calls are failing with status codes 408 or if there is a persistent high response time, please reach out to the appropriate team to investigate the cause of the issue.

Query

```
select * from xs2a_accounts_db.audit_log al
where created_date_time >= '2026-05-21 13:00:00' and
response_time > '1' order by response_time desc; --change the time accordingly

select * from sealhub_db.audit_log al
where created_date_time >= '2026-06-05 13:00:00' and
response_time > '1' order by response_time desc; --change the time accordingly

select * from db_proxy_db.event_log el
where created_date_time >= '2026-06-05 13:00:00' and
response_time > '1' order by response_time desc; --change the time accordingly
```

Verification Steps

- Please verify that no failures/high response time observed once the required action taken after received an alert.
