

PSD2Outbound GCO Alert - Server Proxy Error

Xs2a_

Why do we have this alert?

- This alert is intended to determine whether there are any issues with establishing connectivity to the server proxy.

What does this alert mean?

- Calls to Pegateq will timeout if there are any issues with server proxy connectivity.

Impact to customer

- Customer may not be able to fetch the third party bank details and request may get fail
Note : it could be for any bank, there are multiple of bank added in the list.

Investigation Steps

- We can Start the analysis by picking up CAID (Credit Application ID) for failures analysis in database.
- Check in Error_info column from Audit_log table to identify which event_type has the error. For example if the error is related to EXS (External services) and TPB(Third Party Bank) then we have to reach to VOEB or third party bank.
- OR if the issue indicate the error from the account-service then we have to reach our the COFI development team.

Query

```
select * from xs2a_accounts_db.audit_log where Credit_application_id="PBDECOFI 525-11-00000000 240527-165731 01302706-5";
```

- Check for the events and call failures. As per the prefix identify which event has failed and contact the respective team.(you can reach out to Vaishali(Xs2A) for further investigation.)
