

PSD2Outbound GCO Alert- Java Out Of Memory Error

PSD2Outbound GCO Alert-Java Out Of Memory Error

Why do we have this alert?

- To ensure the microservices are running successfully with proper heap memory.

What does this alert mean?

It is a runtime error in Java that occurs when the Java Virtual Machine (JVM) cannot allocate an object because it is out of memory, and no more memory could be made available by the garbage collector.

Impact to customer-

- It will affect the processing and incoming requests.

Investigation Steps-

- Track memory usage over time. Look for patterns or spikes in memory consumption that could indicate a problem.
- Go to GCP logs and search for the keyword **OutOfMemoryError** and try to find out the sample request ID's as well as the specific service for which these errors are triggered.
- Once you get the above details share it with RTB Team for further investigation.
- Check the database to verify the impact of the issue and make sure whether the requests are flowing.
