Then navigate to Logs by clicking on the "Incident Summary" for the required alert

Text in the logs shall have the details about the request_id

Connect to Clodsql database and run below queries to identify the requests which are impacted due to the issues :

Please change the date according to issue timestamp.

```
select * from db_proxy_db.event_log
where TO_CHAR(created_date_time, 'DD-MM-YYYY') > '21-01-2026';
request_id = '3b4aec36b1caec4616a84d8745b2823'
and severity = 'ERROR';
```

Below query will give details about all Technical failures :

```
select * from db_proxy_db.event_log
where TO_CHAR(created_date_time, 'DD-MM-YYYY') = '21-01-2026';
http_rs_code = '500'
and severity = 'ERROR';
```

Please note the flow for requests would be db-proxy Sealhub(Crypto microservice at PSD2) Crypto service Desk.

Any tech failures coming in db-proxy would be coming from crypto and hence need to reach out to them.

Please reach out to crypto servicedesk at <crypto.servicedesk@db.com> to understand if there is any ongoing issue at their side causing the Timeouts/Internal server error.

If the errors continues , please engage them by calling their hotline **+49 69 910 62325**

Verification Steps-

The complete verification is not possible immediately after investigation but depends on the updates from the upstream/downstream.

Once we see no more alerts triggered and have the updates from upstream/downstream systems , accordingly we can conclude on closure.
