

PSD2Outbound GCO Alert-Sealhub_4XX_error_observed

PSD2Outbound GCO Alert-sealhub_4xx_error_observed

Why do we have this alert?

- The TPP Proxy is implemented to cater to a requirement from the Request To Pay within GTB for their Push Payments functionality. Any 4XX observed in this process can be identify with the help of this alert.

What does this alert mean?

- The SealHub is a component within the Central Engine (PSD2).It's Services ensure a controlled usage of certificates stored Deutsche Bank via dbKeyProtect.
- This is to alert us, if any sealhub request is failing due to 4** (Bad Request/Request Timeout).

Impact to customer

- Customer may not be able to validate the certificate and may not be able to proceed with request.

Investigation Steps

- Get the Audit id/session id from the alert.
- Check the Audit log using the id.
- We will be able to find more details from the response body & credit application id affected can also be available there.
- If we got the credit application id search with the same in cofi logs.
- check for the logs in GCO as well where you can find the error details and same can be shared with RTB team for further investigation.

Query

```
SELECT
*
FROM
vdb308_owner_docseal.audit_log
WHERE
audit_id = 'xxx'
ORDER BY
created_date_time;
```
