

PSD2Outbound GCO Alert-sealhub_5XX_error_observed

PSD2Outbound GCO Alert-sealhub_5XX_error_observed

Why do we have this alert?

- This alert is to notify if there is any 5** error observed in sealhub component within PSD2CE.

What does this alert mean?

- The SealHub is a component within the Central Engine (PSD2).It's Services ensure a controlled usage of certificates stored Deutsche Bank via dbKeyProtect.
- This is to alert us, if any sealhub request is failing due to internal server error.

Impact to customer

- Customer may not be able to validate the certificate and may not be able to proceed with request.

Investigation Steps

- Get the Audit id/session id from the alert.
- Check the Audit_log using the id.
- We will be able to find more details from the response body & credit application id affected can also be available there.
- If we got the credit application id search with the same in cofi logs.
- check for the logs in GCO as well where you can find the error details and same can be shared with RTB team for further investigation

Query

```
SELECT
  *
FROM
  sealhub_db.audit_log
WHERE
  audit_id = 'xxx'
ORDER BY
  created_date_time;
```

Check in Database for latest success request to confirm if the issue is resolved or not

Verification Task

- Once alert is received ,check the request_id,CA_ID/audit_id and check MnM or Cofi requests failing in GCO alert.
- Then check at which event type giving error and for which bank its failing.
- Report this issue respective team, need to monitor closely whether issue resolved or not.
- For that we need to check in Database latest success request.
- check incoming requests for that particular bank success or not.
