

PSD2CE Outbound - XS2A 4xx Error error detected stip

Why do we have this alert?

- This alert serves to notify us for any issues with the CoFi /MnM flow when connecting to third-party banks for various operations such as creating consent, retrieving account lists, or obtaining account statements.
- Please note that this alert does not exclude valid failures; its purpose is to ensure that no issues are overlooked.

What does this alert mean?

- The CoFi/MnM flow connects to pegateq(third-party banks) through server proxy. This alert notifies us of any connectivity issues, as well as any problems with Pegateq or the bank in processing requests.

Impact to customer

- Customer may not be able proceed with credit request/credit card request.
Note : it could be for any bank, there are multiple of bank added in the list.
- List of banks - [CoFi 15. List of Banks - PSD2 Central Engine - Confluence \(db.com\)](#)

Investigation Steps-

Navigate to "Alerting" page in Google Cloud using below link :

[Alerting – Monitoring – db-prd-mp-psd2ce-obd – Google Cloud console](#)

Search for the latest alert for "End with Code: 400" under the Incidents section :

Alerting

[+ Create policy](#)

[✎ Edit notification channels](#)

Monitoring now supports both user-scoped and device-scoped Cloud Console Mobile notification channels

```

CA-IDs are the unique id to analyze the request. Some time we might find EVENT-IDs also in the logs.

Now connect to **CloudSQL** database and run below queries to identify what caused failure and which flow is impacted :

- Once we have the CA-ID we should run a simple query in audit_log table of **xs2a_accounts_db**
- select * from xs2a_accounts_db.audit_log where credit_application_id = '<CA_ID>' order by created_date_time

It would give us response like below:

credit_application_id	event_type	code	description	severity	url
1 MMDEOPRA 345-11-11000093 260109-190946 00745742-8	AS_POST_URL_SUBSCRIPTION_REQ	0	(null)	(null)	https://glue-eprd-gw.de.db.com:8243/v1/subscribe-url

3: Now we need to traverse through the entire rows and identify which event type has failed with 4xx error and what is the descriptions

few of the error descriptions are mentioned below

- System error.

- Unknown exception occurred from VOB

- Voeb Post Psd2 Create Consent Attempt 3 Is Failure

- Temporary error.

- Voeb Get Account Statement Attempt 1 Is Failure

4: Once we identify which call caused the error, every regional call to pagateq will have a different event_id associated with it.

We are required to provide the event id to them for their analysis.

Event Ids are part of the URL

<https://accounts.db.com/rest-api/services/v2.1/psd2consent/event/78185437-e859-48e2-aba9-4b9f85b3cf2a/info>

If we see that the requests status is Valid for latest requests after the failures, we can conclude the issue is not persistent but to identify the root cause of above failure , send an email to PegaTeq (DB Merchant Solutions dbms-support@pagateq.com) with details of Event_ID, CA-ID , status , created_date_time.

In case the issue is persistent or in a critical situation with a high severity issue , we shall reach out to DBMS team on their hotline **+49(0)228 9377-566**

Please note the steps and queries remains same if the credit-application ID is from MnM or CoFi.

Verification Step-

- Use the queries given in Investigation steps to identify if the issue persists or we are getting successful requests.
- The complete verification is not possible immediately after investigation but depends on the updates from the upstream/downstream.
- Once we see no more alerts triggered and have the updates from upstream/downstream systems , accordingly we can conclude on closure.
