

PSD2Outbound GCO Alert - 403 Forbidden

PSD2Outbound GCO Alert - 403 Forbidden

Why do we have this alert?

- The TPP Proxy is implemented to cater to a requirement from the Request To Pay within GTB for their Push Payments functionality. Any 403 observed in this process can be identify with the help of this alert.

What does this alert mean?

- This is to alert us, if any MnM/COFI request is failing due to 403 (Forbidden/Access Denied).

Impact to customer

- Any MnM/COFI requests will not send out of DB network.

Investigation Steps

- Get the Audit id/session id from the alert.
- Check the Audit log using the id.
- We will be able to find more details from the response body & credit application id affected can also be available there.
- check for the logs in GCO as well where you can find the error details and observe 403 Forbidden error.
- Execute below query and check the error code 403

Query

```
select * from xs2a_accounts_db.audit_log where credit_application_id = 'PBDECOFI 525-31-00000000 251106-095608 01622722-8' order by created_date_time desc; -- update id
```

Remediation steps

- Raise to Pagateq Team if they observe any error/issue at their end.
- Raise the issue to Network Akamai CSO Team (details has been provided in below confluence)

[Network Security Engineering - Akamai WAF - Kona Site Defender - KOP - RS - CSO Network Security Engineering - Confluence](#)

Additional Information

- **INC0029321034** sample INC.

- Below are the details:

GCP Source IPs - 100.80.111.192 to 100.80.111.223 (100.80.111.192/27)

Destination URL - <https://accounts.db.com>

Proxy - serverproxy

Start time : 2025-10-28 10:41:28.538302(GMT) - (Intermittent)

Errors :

"org.springframework.web.client.HttpClientErrorException\$Forbidden: 403 Forbidden on POST request for "https://accounts.db.com/rest-api/services/v2.1/psd2consent/event/3a20668c-ece4-4117-99fc-d11241deb580/account-info": "<HTML><HEAD><EOL><TITLE>Access Denied</TITLE><EOL></HEAD><BODY><EOL><H1>Access Denied</H1><EOL> <EOL>You don't have permission to access "http://accounts.db.com/rest-api/services/v2.1/psd2consent/event/3a20668c-ece4-4117-99fc-d11241deb580/account-info" on this server.<P><EOL>Reference #

```

Verification steps:

Use below query to check any recent failure if failure count is not increasing, we are good.

```
select * from xs2a_accounts_db.audit_log where code='403'
```

```
and created_date_time >= '2025-10-20 06:00:00' and created_date_time <= '2025-10-20 14:30:00' – change the date and time accordingly.
```

```
order by created_date_time desc;
```
