

PSD2Outbound GCO Alert - PostgreSQL Connections

PSD2Outbound GCO Alert - PostgreSQL Connections

Why do we have this alert?

- To identify Number of connections to the Cloud SQL PostgreSQL instance

What does this alert mean?

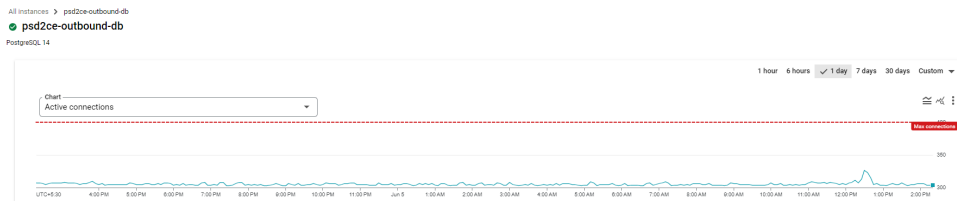

To get to know if the active connections exceeding the threshold.

Impact to customer

- Exceeding the connection limit for your deployment can cause your database to be unreachable by your applications.
- If the number of connections are increased then it can leads to increase in CPU & memory as well as each connection consumes CPU & memory for query processing.
- If the number of connections increase, query response time can increase.

Investigation Steps

- Go to Cloud console
- Navigate to SQL
- Select the PostgreSQL instance
- In the overview we will be able to see the active connection.
