Why do we have this alert?

- To notify if the service mesh has encountered an internal server error.

What does this alert mean?

For early detect of Issues in Istio.

Impact to customer-

- It will affect the currently processing as well as incoming requests.

Investigation Steps-

- Click on the link provided in the email to access the logs in Google Console.
- Verify the alert timestamp, severity, and affected resources.
- Analyze the error messages available in the alert
- Collect additional logs by searching in DB with the affected ids.

Verification Steps-

- Once alert is received, check the request_id, CA_ID, audit_id and check MnM or Cofi requests failing in GCO alert.
- Then check at which event type giving error and for which bank its failing.
- Report this issue respective team, need to monitor closely whether issue resolved or not.
- For that we need to check in Database latest successful request.
- check requests for that particular bank success or not.

Query:

We can use below query for Identify issue

- ```
select * from xs2a_accounts_db.audit_log
where credit_application_id ='PBDECOFI 525-11-00000000 240923-215709 01224505-4'
order by created_date_time;
```

#### We can use below query for Identify issue resolved or not:

```
select code,count(*) from xs2a_accounts_db.audit_log where
created_date_time >= '2025-10-31 07:00:00' and created_date_time <= '2025-10-31 08:30:00' -----Chnage time and date
and code not ('200','201')
and credit_application_id like '%MMDE%' group by code; ---chnage request type
order by 1;
```
