

PSD2Outbound GCO Alert-Istio Internal Server Error Stip

Version1

PSD2Outbound GCO Alert-Istio Internal Server Error

Why do we have this alert?

- To notify if the service mesh has encountered an internal server error.

What does this alert mean?

This alert means a request has failed in Istio service processing and will not be complete.

Impact to customer-

- It will affect the currently processing requests as well as incoming requests if the issue continues.

Investigation Steps-

Navigate to "Alerting" page in Google Console using below link :

[Alerting – Monitoring – db-prd-mp-psd2ce-obd – Google Cloud console](#)

Search for the latest alert for "500 internal server error occurred". under the Incidents section :

Alerting

+ Create policy

Edit notification channels

L

Monitoring now supports both user-scoped and device-scoped Cloud Console Mobile notification channels

State	Severity	Policy name	Incident summary	Opened	Closed	
	Warning	Database - Cloud ...	Condition "Query Execu...	20 Jan 2026, 16:27:38	-	
	Warning	Xs2a account ser...	xs2a-service_4xx_error ...	20 Jan 2026, 16:08:57	20 Jan 2026, 16:13:59	
	Warning	Xs2a account ser...	xs2a-service_4xx_error ...	20 Jan 2026, 14:54:55	20 Jan 2026, 14:56:05	

Then navigate to Logs by clicking on the "Incident Summary" for the required alert

Text in the logs shall have the details about the event , e.g.

```
[ 2026-01-16T11:24:24.844Z ] "00-a39ae6e5c53ba69edd2cd0a9847dd2be-46d1febcf4f51479-01" "46d1febcf4f51479"
 "-" "1" "-" "a39ae6e5c53ba69edd2cd0a9847dd2be/5103139940304491641;o=1" "AACjmulxTumnt0s0KmEfdK+AUBR
 /rz09RR5AgE" "POST /v1/submit-bank-details HTTP/1.1" 500 - 594 119 11380 "100.80.111.209" "Synapse-PT-
 HttpComponents-NIO" "9d8905d0-d9c5-4ce6-9a87-f5b5ac83ae34" "xs2a-account.api.psd2-obd.prd.gcp.db.com"
 "240.23.0.135:9090" 11381
```

From above , we get the event_id which comes just before text "[xs2a-account.api.psd2-obd.prd.gcp.db.com](#)" so in this case, the event_id would be below -

9d8905d0-d9c5-4ce6-9a87-f5b5ac83ae34

When we get this alert, this is most likely due to Outbound CA-ID which failed in processing in Istio service. To identify which ID/request failed , we can follow below steps :

Now connect to CloudSQL database and run below queries to identify what caused failure and which flow is impacted :

select * from xs2a_accounts_db.ais_otb_request_details where event_id = '9d8905d0-d9c5-4ce6-9a87-f5b5ac83ae34';

Query Result ⓘ

SQL ⓘ All Rows Fetched: 1 in 0.253 seconds

event_id	credit_application_id	status	created_date_time	updated_date_time	create
1 9d8905d0-d9c5-4ce6-9a87-f5b5ac83ae34	MMDEOPRA 345-11-11000093 260116-121658 00289169-6	failed	2026-01-16 11:24:36.214	(null)	PSD2

Take the credit_application_id from above results and we can run below query to identify the cause of failure :

In above example **MMDEOPRA 345-11-11000093 260116-121658 00289169-6** is our CA-ID

select * from xs2a_accounts_db.audit_log where credit_application_id = 'MMDEOPRA 345-11-11000093 260116-121658 00289169-6' order by created_date_time;

audit_id	internal_id	credit_application_id	event_type	code	description	severity	method	url
1 144a8e9d-e...	(null)	MMDEOPRA 345-11-1...	AS_POST_URL_SUBSCRIPTION_REQ	0 (null)		(null)	POST	ht
2 df7c6bb9-f...	(null)	MMDEOPRA 345-11-1...	AS_POST_URL_SUBSCRIPTION_RES	201	Credit application id stored successfully	INFO	POST	ht
3 8e218148-e...	(null)	MMDEOPRA 345-11-1...	AS_GET_PSD2_BANK_LIST_REQ	0 (null)		(null)	GET	ht
4 3a080680-c...	(null)	MMDEOPRA 345-11-1...	AS_GET_PSD2_BANK_LIST_RES	200	Bank info retrieved successfully	INFO	GET	ht
5 c05eabf0-2...	(null)	MMDEOPRA 345-11-1...	AS_POST_SUBMIT_BANK_DETAILS_REQ	0 (null)		(null)	POST	ht
6 ad9c23ef-0...	04cf6dba-f...	MMDEOPRA 345-11-1...	VOEB_POST_PSD2_CREATE_CONSENT_ATTEMPT_1_REQ	0 (null)		(null)	POST	ht
7 db2e6e23-9...	04cf6dba-f...	MMDEOPRA 345-11-1...	VOEB_POST_PSD2_CREATE_CONSENT_ATTEMPT_1_RES	400	Temporary error.	ERROR	POST	ht
8 4f7d2a1a-e...	(null)	MMDEOPRA 345-11-1...	AS_POST_SUBMIT_BANK_DETAILS_RES	500	Exception Exception while preparing Account Info	ERROR	POST	ht

The output of the last query will show the failed event. In this example , the request failed in **VOEB_POST_PSD2_CREATE_CONSENT_ATTEMPT_1_RES** event which suggest a failure from Bank/Pegateq side.

To further analyse the issue, identify the bank Name using below query :

select bank_name from xs2a_accounts_db.ais_otb_request_details where event_id = '9d8905d0-d9c5-4ce6-9a87-f5b5ac83ae34';

bank_name
1 comdirect bank

Now to confirm , if the issue is ongoing or it's a one time issue , use below query to find if there are successful requests after the above(recent) failure (bank name to be taken from above output):

select * from xs2a_accounts_db.ais_otb_request_details where bank_name = 'comdirect bank' order by created_date_time desc;

event_id	credit_application_id	status	created_date_time	updated_date_time	cre

If we see that the requests status is Valid for latest requests after the failures, we can conclude the issue is not persistent but to identify the root cause of above failure , send an email to PegaTeq (DB Merchant Solutions dbms-support@pagateq.com)with details of Event_ID , CA-ID , status , created_date_time.

In case the issue is persistent or in a critical situation with a high severity issue , we shall reach out to DBMS team on their hotline **+49(0)228 9377-566**

Please note the steps and queries remains same if the credit-application ID is from MnM or CoFi.

Verification Step-

- Use the queries given in Investigation steps to identify if the issue persists or we are getting successful requests.
- The complete verification is not possible immediately after investigation but depends on the updates from the upstream/downstream.
- Once we see no more alerts triggered and have the updates from upstream/downstream systems , accordingly we can conclude on closure.
