

PSD2Outbound GCO Alert-Tpp_proxy_5XX_server_error

PSD2Outbound GCO Alert-Tpp_proxy_5XX_server_error

Why do we have this alert?

The TPP Proxy is implemented to cater to a requirement from the Request To Pay within GTB for their Push Payments functionality. Any 5XX observed in this process can be identify with the help of this alert.

What does this alert mean?

this is to identify any failures observed in tpp proxy service.

Impact to customer-

Customer may not be able to proceed with request.

Investigation Steps-

- For any tpp-proxy request, the request will flow from tpp-proxy to SealHub.
- So any investigation for tpp-proxy issue we need to check the request in two schema as VDB308_OWNER_TPPPROXY and VDB308_OWNER_DOCSEAL.
- Get the Audit id/session id from the alert.
- Check the Audit_log using the id.
- We will be able to find more details from the response body & credit application id affected can also be available there.
- If we got the credit application id search with the same in cofi logs.
- check for the logs in GCO as well where you can find the error details and same can be shared with RTB team for further investigation

Query- use below query to find failed details:

```
select * from db_proxy_db.event_log
where request_id='XXXX'
order by created_date_time;
```

Verifications Steps:

- Once alert is recived ,check the request_id,CA_ID,audit_id and check MnM or Cofi requests failing in GCO alert.
- Then check at which event type giving error and for which bank its failing.
- Report this issue respective team,need to monitor closely whether issue resolved or not.
- For that we need to check in Databse latest sucesss request.
- check requests for that particular bank sucess or not.
